# Multi-Language

Loqu8 iCE is a powerful instant interpreter for people who know English and want to understand and learn Chinese. What if English isn't your native (or best) language?

LiveScan shows translations into 50+ languages with MLX

Glide your mouse over Chinese and instantly see definitions immediately *auto-translated* into German, Russian, Malay or Korean. As the first augmented learning program with Multi-Language Extensions (MLX), you will have the opportunity to learn Chinese from any of these **50+ languages**: Afrikaans, Albanian, Arabic, Belarusian, Bulgarian, Catalan, Croatian, Czech, Danish, Dutch, English, Estonian, Filipino, Finnish, French, Galician, German, Greek, Haitian (Creole), Hebrew, Hindi, Hungarian, Icelandic, Indonesian, Irish, Italian, Japanese, Korean, Latvian, Lithuanian, Macedonian, Malay, Maltese, Norwegian, Persian, Polish, Portuguese, Romanian, Russian, Serbian, Slovak, Slovenian, Spanish, Swahili, Swedish, Thai, Turkish, Ukrainian, Vietnamese, Welsh and Yiddish.

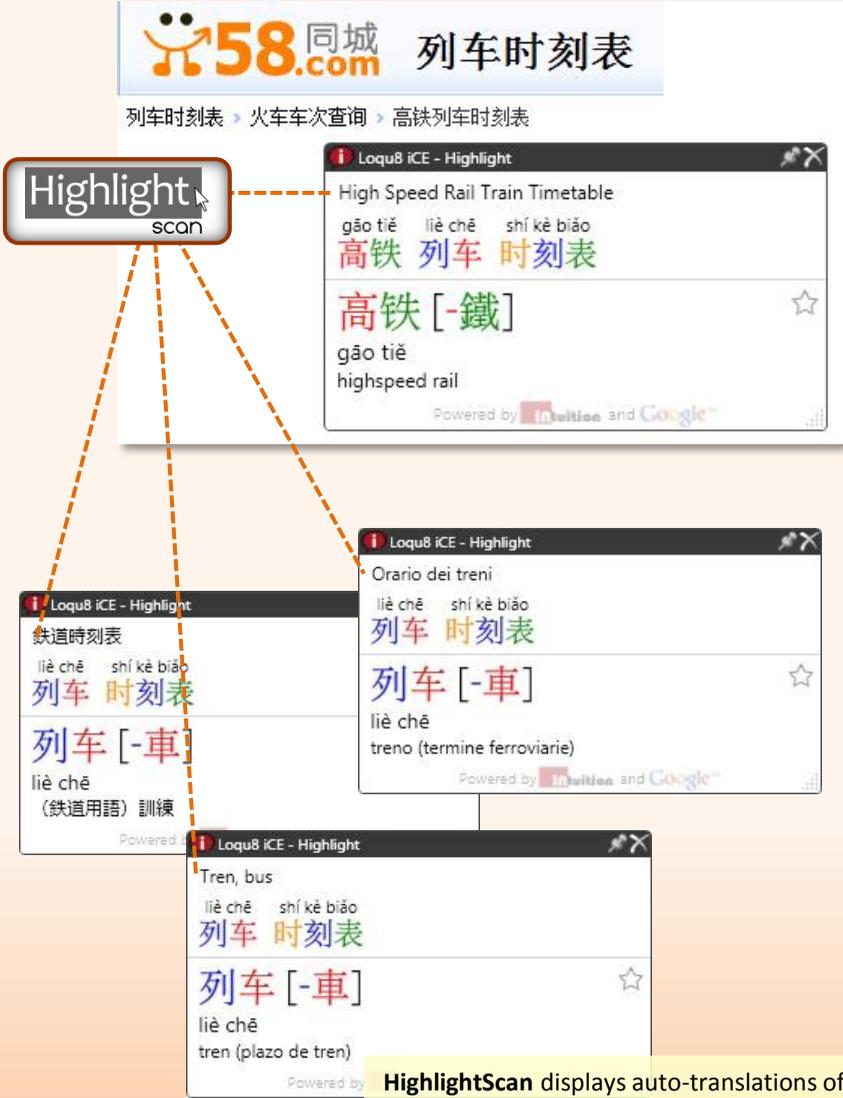

Lookup Chinese or Pinyin and see Chinese words and phrases with auto-translations into Spanish and other languages

Translate phrases and sentences automatically with MLX. Powered by Intuition™ and Google® Translate, iCE presents a “best guess” **auto-translation** of the selected Chinese text.

With HighlightScan, MLX auto-translates both the selected Chinese text and the individual word(s). In the example to the right, MLX auto-translates into Japanese, Italian and Spanish.

HighlightScan displays auto-translations of highlighted text in your favorite language

# LiveScan with MLX

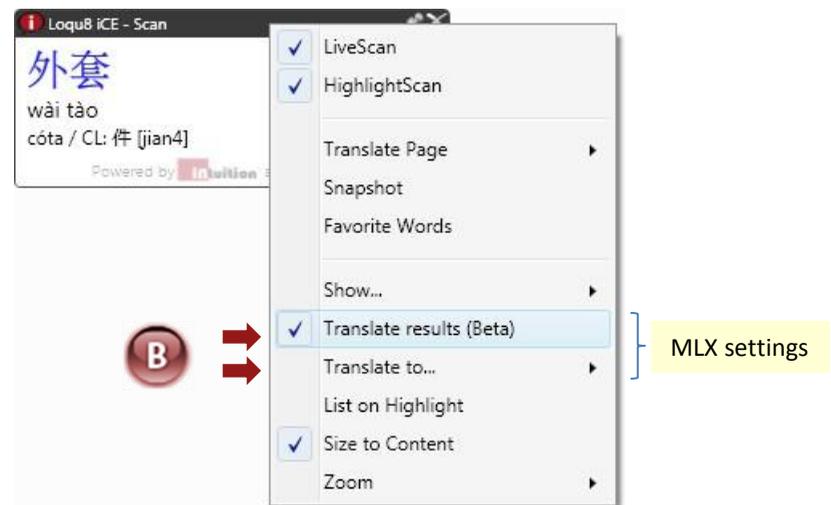

iCE's LiveScan capability instantly displays English translations of Chinese text. By turning on Translate results, the Chinese can be translated into any of 50+ languages.

1. Scan over text and see translations of individual words in the **LiveScan** window [A].
2. Right-click the black menu bar and toggle **Translate results** on. Select a language from the list shown in **Translate to...** [B].
3. Scan over text and see auto-translations of individual words in the LiveScan window [C].

**Tip:** In the scan options menu, MLX translation settings are for *LiveScan*, *HighlightScan* and *Lookup*.

When Translate results are turned **on**, iCE uses the capabilities of Google Translate. An Internet connection is required.

When Translate results are turned **off** (un-checked), iCE operates offline and displays English from its internal translation dictionary. With iCE Professional Edition, you may edit definitions and add new words and phrases to the translation dictionary.

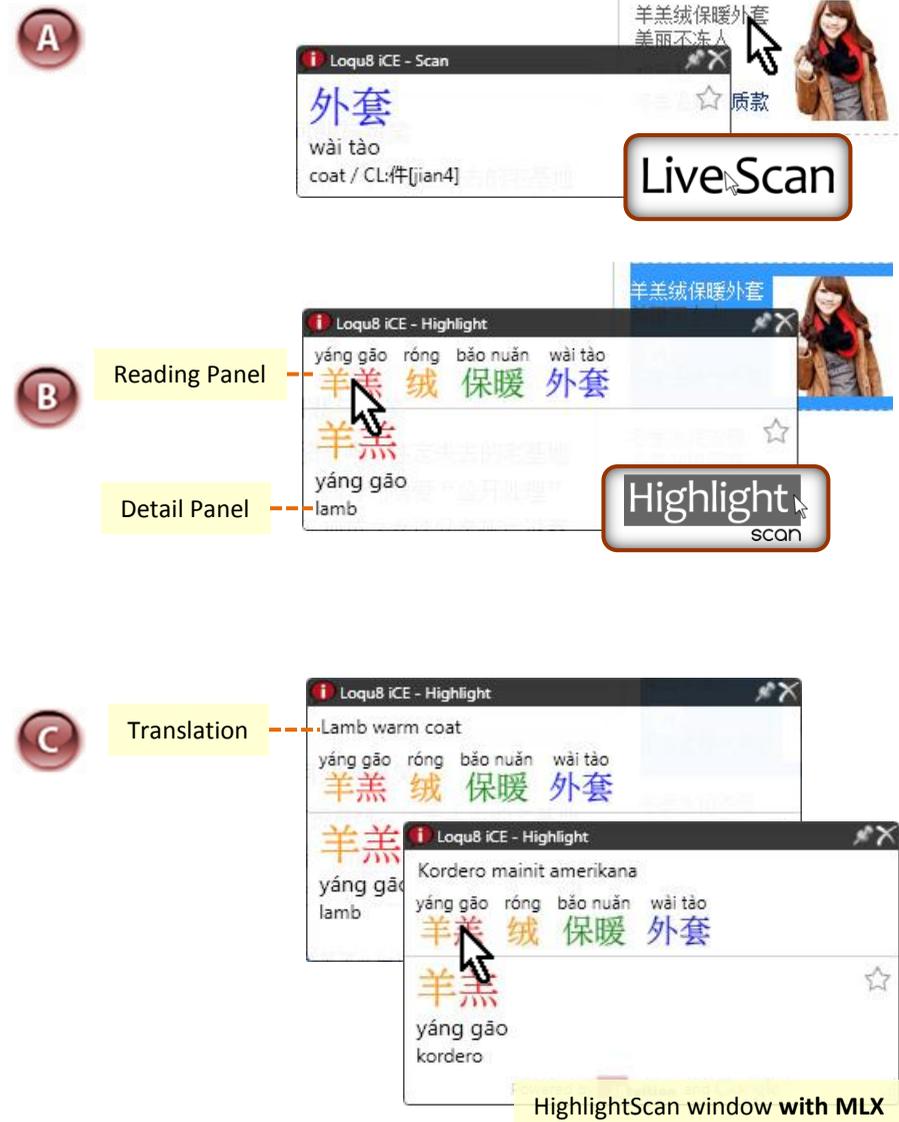

**LiveScan** displays auto-translations of Chinese into Irish and 50+ other languages.

# Highlight Scan with MLX

When you want to understand more than a few words at a time, iCE's HighlightScan capability has been upgraded to auto-translate selected Chinese text into English or 50+ other languages.

1. Just hovering your mouse over text shows the LiveScan window with details on a single word or phrase **[A]**.
2. Highlight a range of text to display the HighlightScan window. Right-click the black menu bar and toggle **Translate results** on. Select a language from the list shown in **Translate to...** **[B]**.
3. Scan over text and see auto-translations of individual words in the LiveScan window **[C]**.

**Tip:** To set the MLX auto-translation settings, right-click the iCE window to open the options menu.

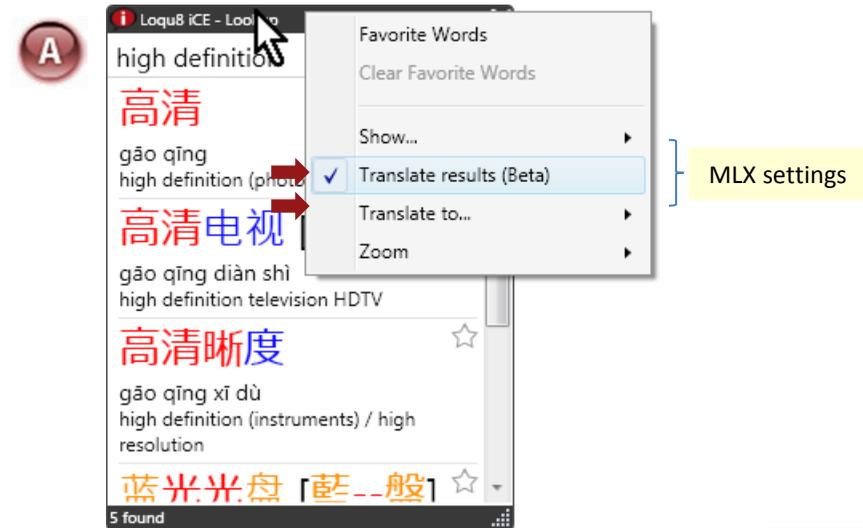

# Lookup with MLX

Although iCE currently does not support multi-language lookup, you can see the results in Chinese with auto-translated meanings.

1. Open the Lookup menu by right-clicking the iCE icon in the Windows system tray and choosing **Lookup**.
2. Set the MLX auto-translation settings by right-clicking the Lookup options window. Enable **Translate results** and choose the auto-translation language. **[A]**.
3. Enter Chinese text, Pinyin or English and iCE will display a list of matching words and phrases. **[B]**.

**Tip:** Like a reverse dictionary search, enter the meaning of a word in English and *Lookup* displays Chinese words and phrases that have that word(s) in the definition.

# Ruby Text

Ruby text is annotation that is placed near the Chinese text to help the reader gain familiarity with the word and pronunciations. Used in both formal and informal learning environments, these annotations act as “subtitles.”

Guǎng zhōu	yà	yùn	dà xióng māo	zhèng shì	zhǎn chū
广州	亚	运	大熊猫	正式	展出

Horizontal or vertical **alignment**

软件	ruǎn jiàn
与	yù
IT	
服务	fú wù
消费	xiāo fèi
电子	diàn zǐ
信息化	xìn xī huà
家电	jiā diàn
电器	diàn qì
半导体	bàn dǎo tǐ
计算机	jì suàn jī
与	yù
外设	wài shè

Use Pinyin or Bopomofo **phonetics**

Over time, users and learners will begin to develop associations and gain literacy in Chinese. Loqu8 generates ruby text with Pinyin or Bopomofo phonetics.

软件	与	IT	服务	消费	电子	信息化	家电	电器	半导体	计算机	与	外
----	---	----	----	----	----	-----	----	----	-----	-----	---	---

Software y servicios informáticos, electrónica de consumo, aparatos de información y periféricos informáticos, semiconductores redes eléctricas de comunicación de televisión digital e-commerce pequeños electrodomésticos

Add English, Spanish or other **translations**

Some popular uses for ruby text include:

- presentations
- vocabulary and pronunciation guides
- music lyric sheets
- personal study guides

nǐ de huà  
你的話

wǒ qiāng nǐ de huà yǔ shēn cáng zài  
我將你的話語，深藏在

By highlighting Chinese text, iCE generates the ruby text (Pinyin, in the example above). Paste the ruby text into Excel for editing. Transfer the ruby text into PowerPoint or Word for advanced text and table formatting.

In minutes you'll have high-quality presentations and handouts. See the next pages for step-by-step instructions.

nǐ de huà  
你的話

wǒ qiāng nǐ de huà yǔ shēn cáng zài wǒ xīn  
我將你的話語，深藏在我心，

miǎn de wǒ dé zuì nǐ miǎn de wǒ yuǎn lí  
免得我得罪你，免得我遠離。

ò zhǔ a yǔ wǒ qīn jìn  
哦主啊！與我親近，

wǒ ài nǐ shēng yīn zuò wǒ jiǎo qián de dēng  
我愛你聲音，作我腳前的燈，

zuò wǒ lù shàng de guāng  
作我路上的光。

tiān dì jiāng yào guò qu nǐ de huà què cháng cún  
天地將要過去，你的話卻長存，

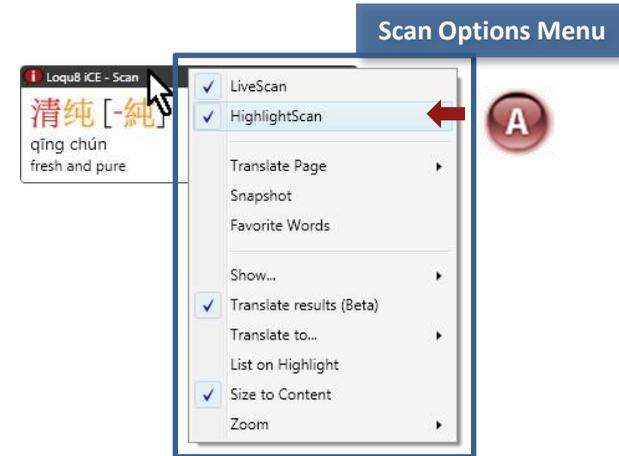

tiān dì jiāng huǐ huài nǐ de huà què cháng xīn  
天地將毀壞，你的話卻長新。

# Generating Ruby Text

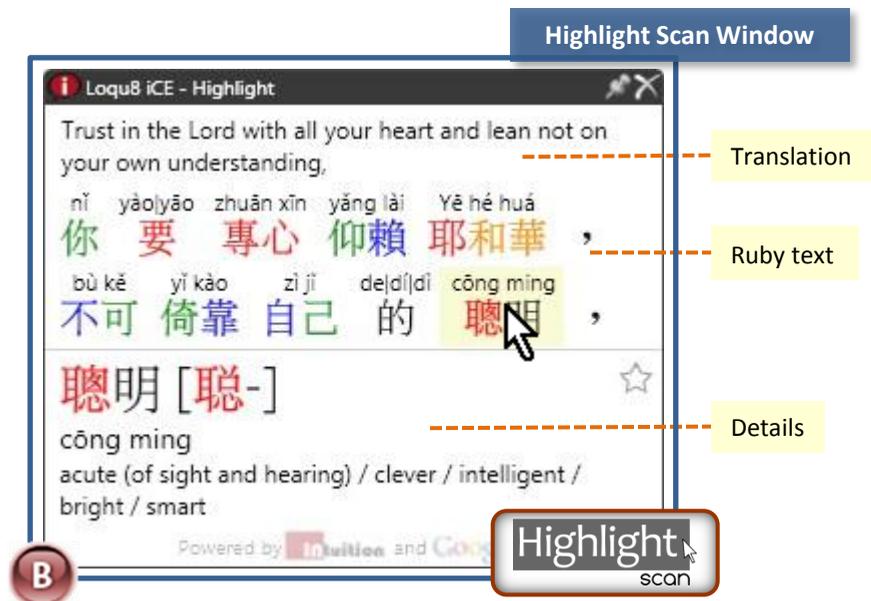

Verify that iCE is configured for Highlight scan:

1. Start iCE.
2. Hover your mouse over any Chinese text to display the LiveScan Window.
3. Right-click on the LiveScan window's black title bar. In the Scan Options menu, verify that **Highlight Scan** is checked [A]. By default, Highlight Scan is enabled.
4. Click anywhere to dismiss this menu.

To generate ruby text:

1. Highlight Chinese text in your document or web page. The iCE HighlightScan window will appear [B].
2. Click on any entry in the **ruby text** region to see **details** in the lower pane.
3. Press Ctrl-A to select all the entries in the ruby text region.

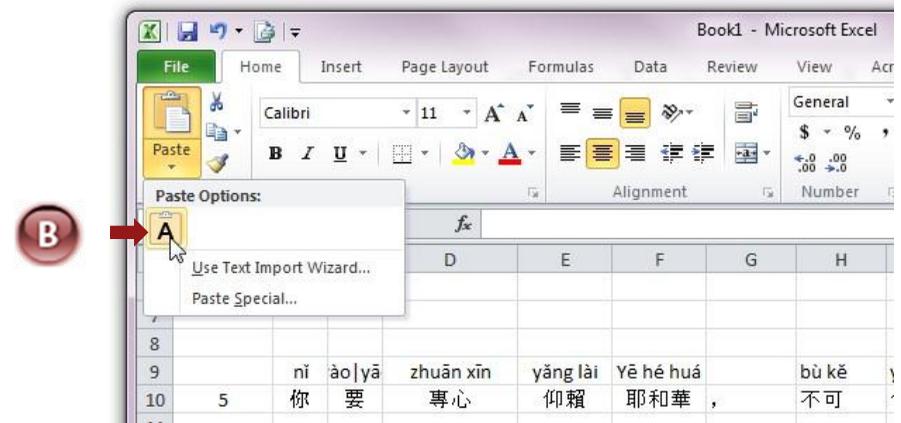

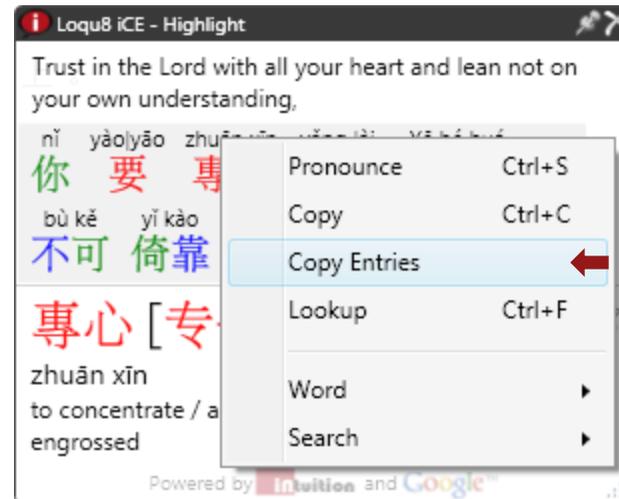

## Formatting and Using Ruby Text

After generating ruby text, let's apply some formats and use it in a document or presentation.

1. With the ruby text selected in the Highlight Scan Window, right-click to open the menu and select **Copy Entries** [A].
2. Open Microsoft Excel. Click on any cell and choose **Paste** [B].
3. Edit any of the ruby text. For example when there are multiple possible Pinyin for a single Chinese word, you may want to delete the unnecessary Pinyin.
4. When all the edits are completed, use Excel's formatting commands to apply cell alignment, fonts, colors and shading.

**Tip:** To show the ruby text below the Chinese, select the cells and move (or cut and paste) them into a row below the Chinese.

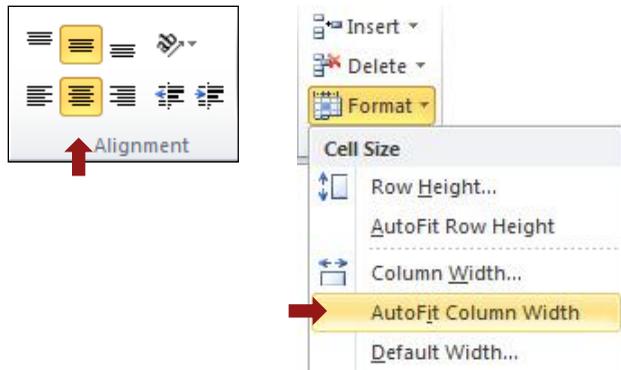

# Formatting and Using Ruby Text

## Pasting into Microsoft Word, Excel and PowerPoint

Choose the Paste command. By default, the application will paste this text as **Kept Text Only (T)**. See [A].

### Formatting Tips

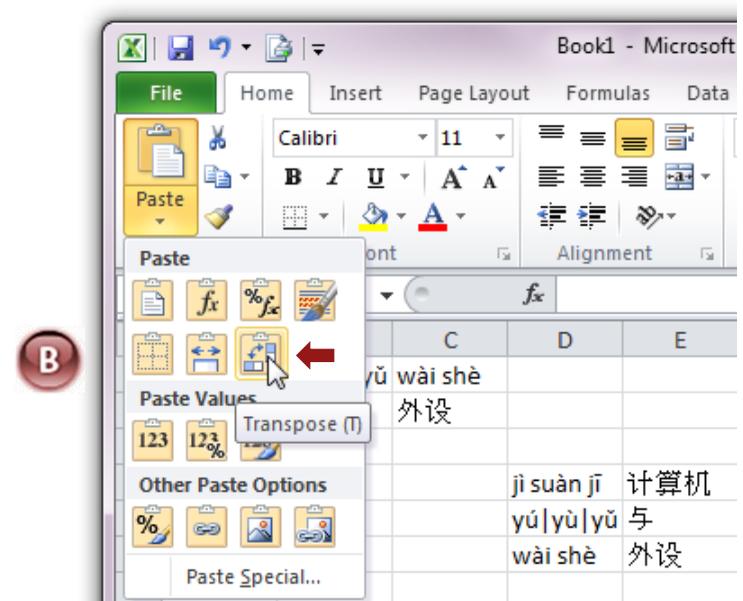

- Select **center** alignment (horizontal and vertical)
- In Excel, choose **AutoFit Column Width**

### Building a Vertical List

Ruby text may also be placed vertically. To build a vertical list with Chinese in one column and ruby text in another column:

1. Paste the cells anywhere into Excel.
2. Select and copy the cells with Chinese and the ruby text
3. Click on Paste and choose **Transpose (T)** option function of Excel. See [B].

## Copy vs. Copy Entries

Right-clicking in the Highlight Scan window and you'll see two copy commands, see [A]:

- **Copy:** copies only the selected Chinese character(s).

计算机
与
外设

- **Copy Entries:** copies the selected Chinese character(s) plus the Pinyin (or Bopomofo) in a ruby text table format.

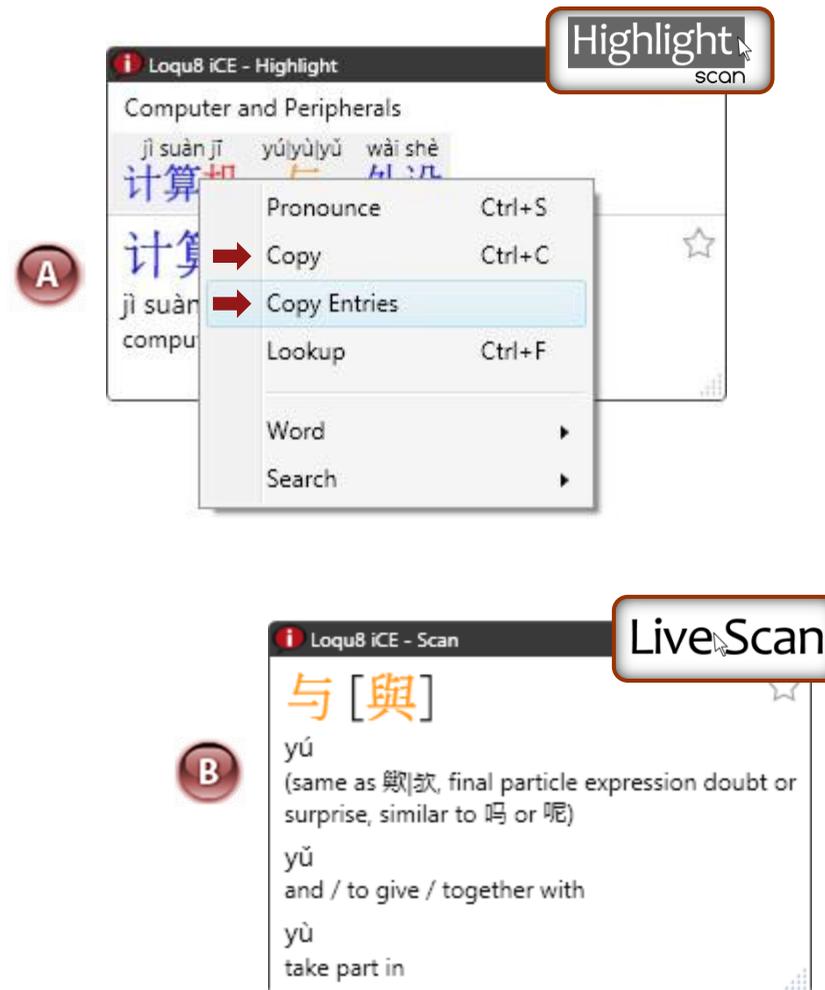

jì suàn jī	yú yù yǔ	wài shè
计算机	与	外设

## Multiple Meanings

The translation dictionary always shows all possible meanings for each Chinese character. For example [B]:

与[與]	yú	/(same as 歟, final particle expression doubt/
与	yǔ	/and/to give/together with/
与	yù	/take part in/

For clarity, you may want edit any unnecessary entries before formatting or using them.

# Using PDF Files

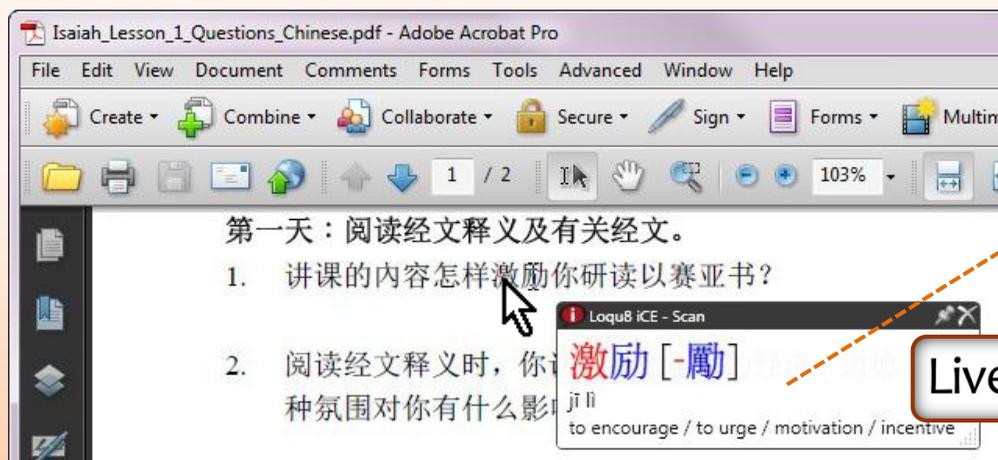

By popular request, ICE can now work with many documents in text-based PDF format. Depending on your PDF reader, you may be able to use *LiveScan*, *HighlightScan* or both.

Popular PDF viewers include:

- *Adobe Reader*:  
<http://get.adobe.com/reader/>
- *Nitro PDF Reader*:  
<http://www.nitroreader.com/>
- *Foxit Reader*:  
<http://www.foxitsoftware.com/pdf/reader/addons.php>

HighLightScan in PDF using Nitro PDF Reader

LiveScan in PDF with Adobe Acrobat

# Working with PDF

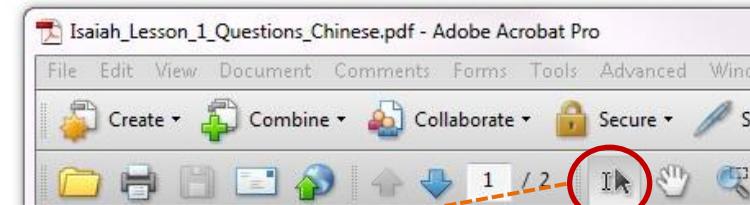

The PDF file format encapsulates many capabilities, including:

- Text
- Images, including scans of text
- Interactive elements, like buttons on forms

To view a PDF file in Windows, Adobe Reader or compatible PDF viewer is required. iCE supports unrestricted, text-based PDF documents with standard encoding. Documents with password-protection or custom font encoding are not accessible.

1. Choose the **text selection** tool. This is **not** the same as the **type text** tool for adding annotations.
2. Depending on your PDF viewer, hover your mouse over Chinese text (LiveScan) or highlight Chinese text (HighlightScan text). The iCE window will display translations.

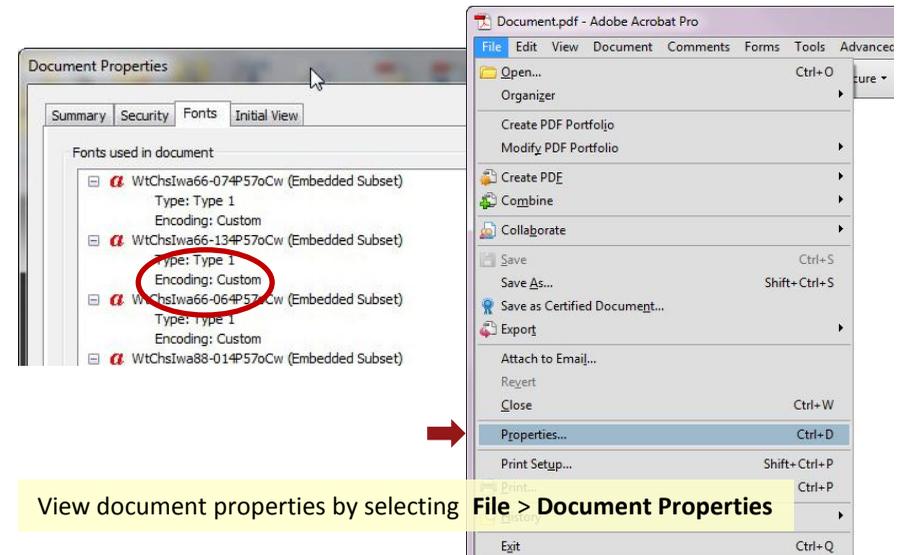

**Tip:** If the text cannot be selected, copied and pasted into the *Windows Notepad* or *Microsoft Word*, then iCE cannot work with this document.

Choose the **text selection** tool

NOT type text tool

View document properties by selecting **File > Document Properties**

## LiveScan with PDF

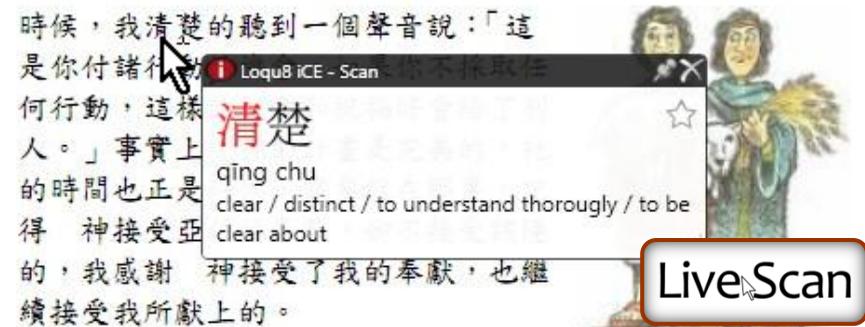

Loqu8's LiveScan works with PDF files in the same manner as documents in Microsoft Word and Firefox web browsers. Just hover your mouse and iCE does all the work.

1. Open your PDF file and select the text selection tool.
2. Hover your mouse pointer over Chinese text. If LiveScan is supported by your PDF viewer and your document, then the LiveScan window will appear.

**Tip:** Not all PDF viewers support LiveScan. Currently *Adobe Reader* and *Foxit Reader* support this mode.

LiveScan in PDF using Adobe Acrobat Pro

LiveScan using Foxit Reader

## ► HighlightScan with PDF

Loqu8's HighlightScan mode lets you select text and let iCE's comprehensive dictionary and auto-translation capabilities show you the meaning of Chinese text.

1. Open your PDF file and select the text selection tool.
2. Highlight the range of text with your mouse. If HighlightScan is supported by your PDF viewer and your document, then the HighlightScan window will appear.

**Tip:** Not all PDF viewers support HighlightScan. Currently *Nitro PDF Reader* and *Foxit Reader* support this mode.

# Native x64

If your Windows computer is equipped with 4GB or more of memory, the factory probably shipped it with a 64-bit version of Microsoft® Windows 7 or Windows Vista. **The good news:** iCE v5.5 now runs as a *native 64-bit application* and you'll automatically experience slightly greater performance.

## Who Needs 64-bit Software?

While the preponderance of software for Windows PCs run in 32-bit mode, most new computers since the mid 2000s have been equipped with 64-bit microprocessors, including:

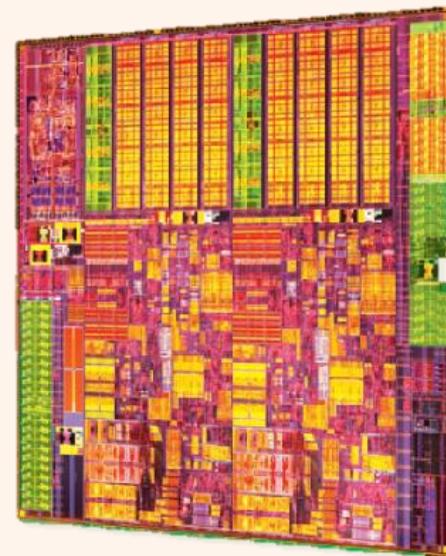

- AMD64™: Opteron, Phenom II, Turion and Athlon 64 families
- Intel64™: Pentium 4 and Core (2, i3, i5, i7) families

Achieving the benefits 64-bit hardware requires a 64-bit operating system, like Microsoft's *Vista x64* and *Windows 7 x64*. Most 32-bit applications, including earlier versions of iCE (i.e., Version 5.3), will run in the 64-bit environment but with slightly reduced performance and functionality.

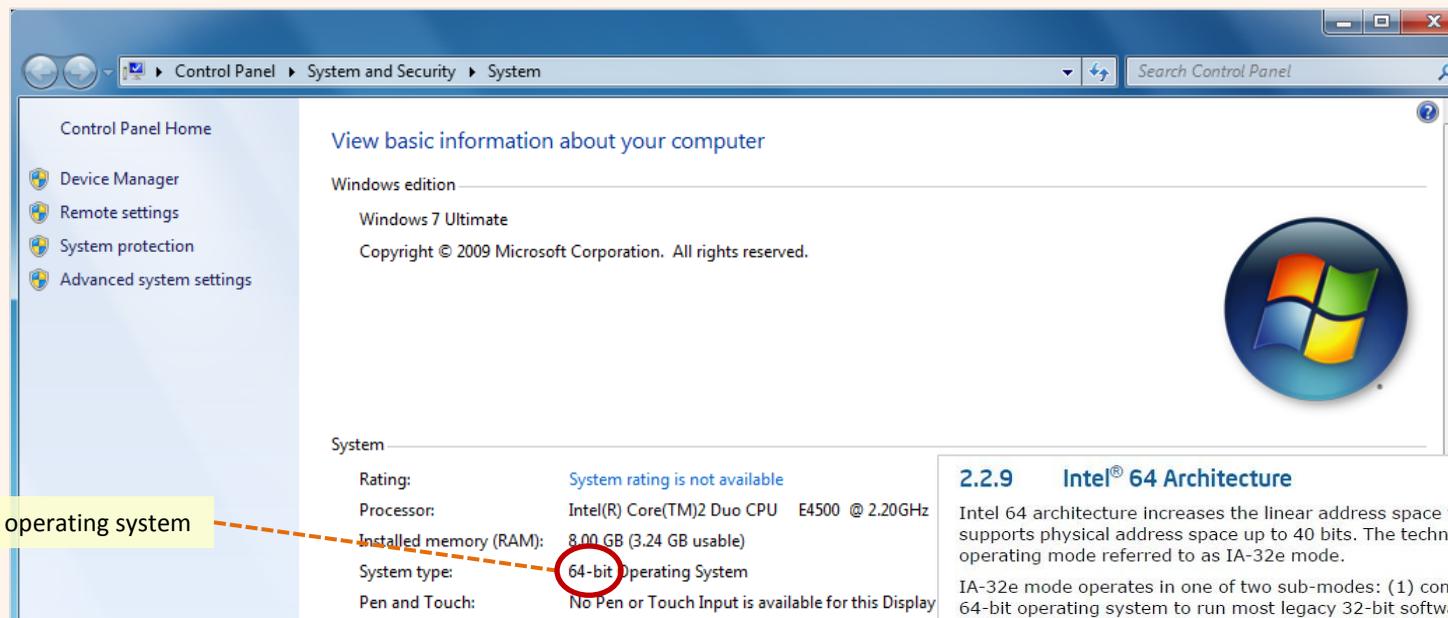

## Advantages of 64-bit

- Access to more than 4GB of memory, important for multitaskers handling many applications simultaneously. Most versions of Windows 7 x64 and Vista x64 can address 128GB of RAM.

*Die from Intel Core i5, a modern 64-bit microprocessor*

- Enhanced security protects systems from misbehaving applications. *Data execution prevention* (DEP) is designed to stop malware from using buffer overflow techniques to attack computers. *Kernel patch protection* (PatchGuard) protects the Windows kernel from illegitimate updates. On 32-bit Windows, DEP is managed in software; PatchGuard is not supported on 32-bit Windows. Windows x64 editions support PatchGuard and DEP is supported in hardware.
- All 64-bit device drivers must be digitally signed. Unsigned (insecure) device drivers are not supported.

64-bit operating system

### 2.2.9 Intel® 64 Architecture

Intel 64 architecture increases the linear address space for software to 64 bits and supports physical address space up to 40 bits. The technology also introduces a new operating mode referred to as IA-32e mode.

IA-32e mode operates in one of two sub-modes: (1) compatibility mode enables a 64-bit operating system to run most legacy 32-bit software unmodified, (2) 64-bit mode enables a 64-bit operating system to run applications written to access 64-bit address space.

In the 64-bit mode, applications may access:

- 64-bit flat linear addressing
- 8 additional general-purpose registers (GPRs)
- 8 additional registers for streaming SIMD extensions (SSE, SSE2, SSE3 and SSSE3)
- 64-bit-wide GPRs and instruction pointers
- uniform byte-register addressing
- fast interrupt-prioritization mechanism

### Installing and Using iCE x64

To minimize installation confusion, Loqu8 ships iCE with integrated x86 and x64 support. iCE automatically detects and uses the appropriate section of code (32-bit or 64-bit). Users who upgrade from Windows 32-bit to 64-bit will not need to re-install iCE.

**Tip:** Windows x64 users may use either Microsoft Internet Explorer x86 or x64. With previous versions of iCE, only IE x86 supported LiveScan.
